

Hair and Eye Color Survey

The file `hair_and_eye_color.txt` contains survey results on hair and eye color.

First, use Proc Sort to eliminate any duplicate values for the variable "ID".

Next, do the following:

1. Determine the frequency of people with each hair color and each eye color, individually, and with each combination of hair and eye color.
2. Create a dataset containing only the people with Green Eyes. Do not include the EyeColor variable in the dataset.
