

# Top Salesperson

You work in a company that sells computers.

Each day, your boss wants to have reports showing the total sales that day, the name of the top salesperson for that day, and the name for the cumulative top 3 salespersons for the year (as well as their total sales).

Create a macro program that can be run each day to create the reports. The most recent reports already created are as of October 31<sup>st</sup>, 2017. Sample reports are on the next page.
