

# Diving

The file diving.sas7bdat contains scores from a diving competition.

Each country has 3 divers who are scored on 5 dives each. There is a prize for best individual diver and best country.

For the individual competition, the winner is the diver with the highest average score of their best 4 dives.

For the team competition, only the best score for each diver is considered. Then, the winning country is the one with the highest average score from its three divers' best scores.

Use Proc Sort and Proc Means to determine the winner of the individual and team competitions. The tables in the Results Viewer must show the final score for each competition, but do not need to be sorted from high to low.
